

Redesign the Misleading Colored Chart

Roll.: 31 **Reg. No:** 192524223 **Name:** Puttur Mohith Kumar Reddy

Each chart below uses color in a misleading or confusing way. For each one, answer the three questions in your own words.

Chart 1

1. What is this chart trying to show?

The chart shows the number of vehicles registered by type. The height of each bar represents the number of vehicles in each category.

2. What's wrong with the color choice?

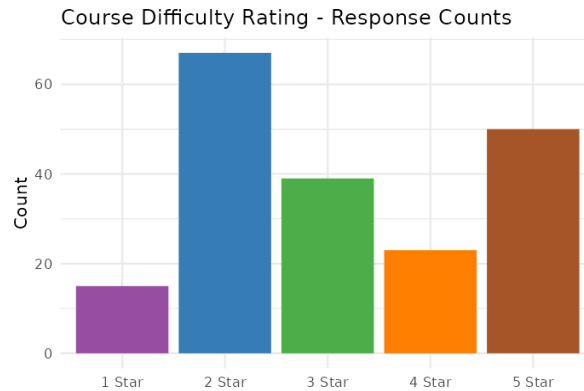

The colors are different for every bar even though they represent the same type of information. The different shades can make some bars look more or less important than others and may distract from comparing the values.

3. Propose a better color scheme (describe it in words):

Use one consistent color for all the bars, such as blue. If highlighting one specific vehicle type is necessary, use a darker shade for that bar and keep all other bars the same color.

Redesign the Misleading Colored Chart

Chart 2

1. What is this chart trying to show?

The chart shows the number of responses for each course difficulty rating from 1 Star to 5 Star.

2. What's wrong with the color choice?

Each bar has a different color, which can make the categories look unrelated or give the impression that some ratings are more important than others. The colors distract from comparing the response counts.

3. Propose a better color scheme (describe it in words):

Use one consistent color, such as blue, for all five bars. This makes the chart easier to read and compare the ratings without making any category look more important because of its color.
